

Clustering and Association Rule Mining

This concise module is designed for AI-agent based learning and quick revision.

K-Means

Groups data into K clusters based on similarity.

Elbow Method

Helps choose the optimal K value.

Hierarchical Clustering

Builds nested clusters using a tree structure.

DBSCAN

Density-based clustering that detects noise.

Apriori

Finds frequent itemsets.

Support

Frequency of an itemset.

Confidence

Likelihood that rule Y occurs when X occurs.

Lift

Measures rule strength compared to random chance.

Quick Revision: Revise definitions first, understand key concepts, then practice MCQs.
